

Replacing Grass With Groundcover

Are you tired of mowing your grass? Can't seem to keep it green? Think about replacing your grass with groundcover. Easy to grow, with beautiful flowers or foliage, groundcover lets you take a break and enjoy your beautiful garden.

Benefits of Groundcover

- Less irrigation – Lower water waste and cost
- Less fertilization and pesticide spray – Less potential contamination of groundwater
- Year round beauty – Beautiful foliage and flowers throughout the year

Step-by-step to Replacing Grass

1. Select areas of grass for removal
2. Determine light and soil conditions
3. Select the proper groundcover
4. Remove or kill existing grass and weeds
5. Plant new groundcover
6. Enjoy!

Maintenance of Groundcover

- Prune, mow or edge as needed to contain the groundcover
- Fertilize lightly from time to time to encourage growth

Some Common Groundcover

Sun

Purslane
Lantana
Sunshine Mimosa
Golden Peanut
Juniper
Honeysuckle
Dwarf Oyster
Blue Daze

Part Shade

Dwarf Jasmine
Wedelia
Liriope
Aztec Grass
