

# *Cold Hardy Landscaping*

## **Assess the Location**

1. How much sun does the area receive?
2. What is the soil condition (sandy, clay, etc.)? Will it need amendment?
3. Which direction does the area face?

## **Plant Properly**

1. Amend the soil if needed.
2. Never plant deeper than the existing soil level.
3. Use hardy plants that are right for the location.
4. Water well to establish a deep root system.

**Now it's time to pick the plants! Use the lists below to find the right plants for your area.**
